

Good2BeBack for K-12 Schools

**Simple, Inexpensive, Efficient.
Perfect in an imperfect world.**

The answer to your reunification problem is here.

With just a few clicks a day, your staff, vendors, students, parents and others can more safely return to work, school, and life.

Welcome to Good2BeBack, the one app that enables schools to easily and efficiently reunite with staff, vendors, students, parents, visitors and more. All health data is consolidated for compliance with HIPAA, FFCRA, and other regulatory agencies.

The Good2BeBack iOS & Android interface is simplified so that registration and daily check-ins are easy to complete for everyone that needs to attend or visit your facilities. School & School District Administrators receive near real-time updates on the health status of everyone preparing to enter and are immediately informed if there is a health risk, enabling them to mitigate the spread of COVID-19 and other infectious diseases to come.

How does it work?

Daily Check-In Questions

Users simply check-in daily on their mobile devices and report whether or not they are symptomatic by answering customized questions provided by the school district. *Symptomatic?* If they are not symptomatic, then they receive an “Allow Entry” status via the app. If they are symptomatic, then they receive a “Deny or Pause Entry” status and School Administrators are notified immediately.

Parents are also notified immediately if students report symptoms so that they can confirm the health status of their children.

Test Results

Anyone required to submit test results can easily do so, every time they are tested.

Entry Rules

School District Administrators customize the questions asked and what the acceptable requirements are for daily reunification (e.g., non-symptomatic and negative for virus). These are all customizable and changeable in this ever-changing environment.

Notifications

Symptomatic and/or Positive Test Result Notifications are sent in near real-time to System Administrators and Parents via Mobile Push Notifications and Email.
